

AI Voice Agent Design – Divyasree "Whispers of the Wind"

The Project Context

- Project: Whispers of the Wind (WOW) by Divyasree Developers.
- Product: Premium "Private Valley" villa plots (1200–3199 sq.ft.).
- Location: Nandi Valley (near Nandi Hills), North Bengaluru.
- USP: 74% open spaces, 20,000 sq.ft. clubhouse, eco-parks, and scenic hill views.
- Pricing: ₹92.4 lakh – ₹2.46 Cr (inclusive taxes).
- Target: HNIs, CXOs, and NRIs seeking luxury weekend homes or high-yield investments.
- Possession Timeline: December 2029

Your Task

Build an outbound AI Voice Agent (using any available platform) to qualify potential leads that can hold a conversation for 2 to 3 minutes while following the instructions below.

1. Conversation Architecture

Your bot should follow this logical flow:

- Introduction: Professional greeting introducing yourself as a Divyasree consultant. Mention the project and location. Crucial: Always ask for permission to speak.
- Qualification (The 4 Checkpoints):
 - Intent: Self-use vs. Investment.
 - Geography: Comfort with the Nandi Hills/Devanahalli corridor.
 - Source Budget: Fitment check for the ₹92.4 lakh+ starting price.
 - Timeline: Comfort with phased delivery/ongoing project status.
 - The Pitch: A high-end, aspirational description of the "Private Valley" lifestyle (clubhouse, nature, and community).
 - CTA: Request a follow-up call with a Property Expert.

2. Technical Requirements

- Natural Language: Use affirmations ("Understood," "Perfect") and avoid re-asking questions if the user provides info early.
- Pronunciation Guide: Include a phonetic guide in your system prompt for terms like *Divyasree* (Div-yaa-shree), *Nandi* (Nun-dhee), *Lakh* and *Crore*.
- Tone: Premium, conversational, and non-intrusive.

3. Deliverables

REVSPOT

- Demo Link: A shareable link to the working bot or a recorded audio files of test calls. **IMP: In case of recorded audio, please share at least 5 conversation flows handling different conversation flows**
- System Prompt (PDF): The full "System Message" used to configure the bot, including the pronunciation dictionary.

Bonus:

- Handling edge cases (irritated user, budget fit but not location fit etc.)
 - Multilingual handling (English + Hindi)
 - Additional details of the project if asked (this is an actual project and can be searched online)
-
